Liposuction

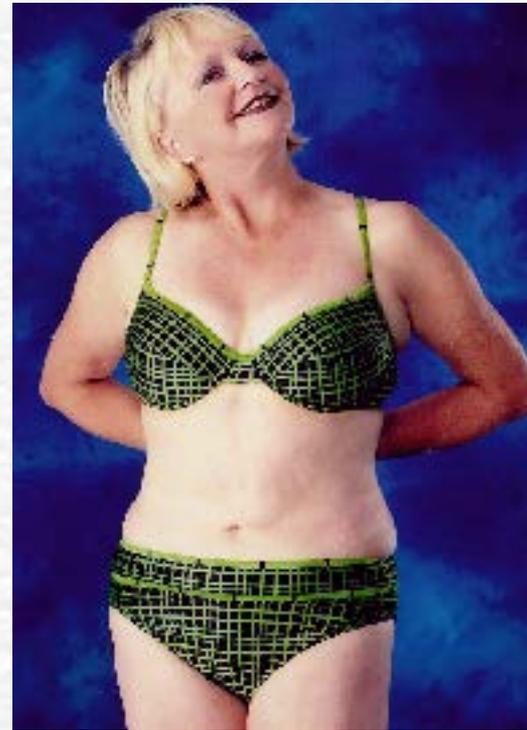

Removes Fat Permanently

- **Liposuction removes stubborn unwanted fat that you have not been able to diminish through diet and exercise.**
- **Once removed, these resistant fat deposits will not return, meaning your new body shape is permanent.**
- **Fatty deposits found mainly in the tummy, abdomen, buttocks, inner and outer thighs, back and under the chin can now be safely and quickly removed with minimal discomfort.**

LIPOSUCTION

Liposculpture

Instant Results

- **Liposculpture can be performed as a walk-in, walk-out procedure using local anaesthesia.**
- **There is minimal discomfort and you are able to return to work in 1-3 days.**
- **Your normal day to day activities are barely restricted.**

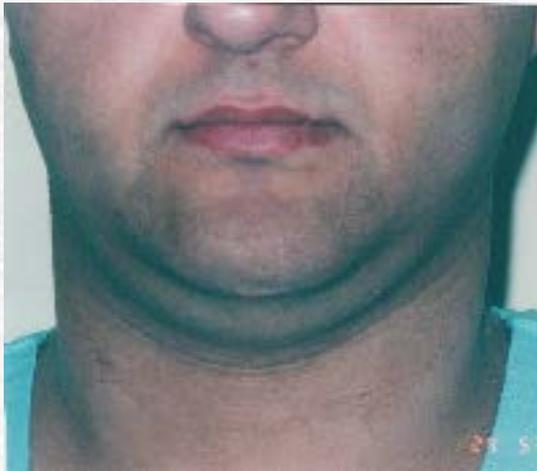

- **Liposculpture is the same procedure as Liposuction, except that as well as removing excess fat, Dr Goldbaum sculpts and contours your body shape.**
- **As local anaesthesia is used, you are awake and responsive and can move and turn as required. This enables the maximum amount of fat to be removed.**
- **Towards the end, you can actually sit up and stand up so that further fine tuning can be done to produce your new, smooth and svelte shape.**

IMMEDIATE RESULTS

LIPOSCULPTURE

Before

After

FOR MEN AS WELL

LIPOSCULPTURE

LIPOSCULPTURE

Before

After

- The benefits of Liposculpture can be seen immediately.
- Although additional skin contraction is anticipated in the next few weeks, you are still able to appreciate your new image from day one.

*Liposculpture not only
enhances your appearance,*

*it can also boost your
self-confidence.*

YOU LOOK GOOD!

FEEL GREAT!

& SHOPPING FOR CLOTHES

TAKES ON A NEW MEANING!

FAT TRANSFER

- Lipoplasty is removing your own body fat from one area of your body and transferring it to other areas of your body to remodel or enhance your appearance. The benefit of this procedure is that there is no rejection of the transplanted fat and the recovery is very rapid. Extra fat is removed and frozen for future top ups.
- Significant absorption of the transferred fat can occur over the first 4 weeks, however 2-3 top-ups with your stored (frozen) fat may be required. Usually the fat that remains after one month is likely to remain permanently and behave like normal fat.
- The objective of this surgery is not to remove excess weight, but to improve the contour of the body.

TRANSFER TO BREASTS

- Many women lose large amounts of breast fat after breast-feeding, dieting, illness and ageing. This fat can be replaced with your own body fat, harvested by “Liposuction”.
- Large volume fat transfer to breasts can also be combined with Liposculpture to other areas. This fantastic procedure allows the woman to choose the shape and size of her breasts whilst still retaining their natural feel.
- This form of breast enhancement is suitable for many women but of course some women are unsuitable for this procedure. An example of women who may not be suitable for this procedure are those who are likely to fall pregnant again.

FAT TRANSFER

FAT TRANSFER

FAT TRANSFER

TRANSFER TO FACE

- As we age during extended weight loss programs, we easily lose fat from the face.
- This produces sagging, skin wrinkling and deepening facial lines – the common signs of ageing.
- These signs can be halted and even reversed by the relatively simple and safe transfer of a patient's own fat from one area of their body to their face. Even small quantities of transplanted fat can produce dramatic age reversing effects.

QUESTIONS & ANSWERS

New Image Sculpture

Affordable, Safe, Convenient

Q. *How safe is Liposuction?*

- Liposuction performed under local anaesthesia is a very safe procedure.
- The incidence of serious side effects or complications is extremely rare.

Q. *Is 50 too old for Liposuction?*

- Dr Goldbaum has successfully treated patients in the age range from 19 – 70 years.

Q. Do I have to be in perfect health?

- It is preferable to be in good health whilst undergoing any procedure. Liposuction however can also be performed on patients with medical problems including arthritis, high blood pressure and diabetes.

Q. *Do I need to go to a hospital?*

- Liposuction can be safely performed in our clinic as only local anaesthesia is used. There is minimal discomfort at times during the procedure, and you will feel well enough afterwards to enjoy a sandwich and a drink before you go home.

Q. *What happens to my skin afterwards?*

- The skin has an enormous capacity to expand and contract. The amount of shrinkage depends on the condition and age of your skin. Certain techniques are used to encourage skin contraction. In very obese patients a minor skin overhang may occur that can be corrected at a later stage.

Q. When can I see the results of Liposuction?

- Your new shape will be apparent immediately.
- Further skin contraction is anticipated in 4-6 weeks, while final skin contraction can take up to 6 months.

Q. *Is Liposuction expensive?*

- Modern Liposuction is very affordable.
- The cost varies from patient to patient, and depends on the number of areas to be treated.
- Dr Goldbaum will be happy to provide you with an obligation free consultation.

Q. *Will the fat come back?*

- Liposuction removes the cells that store the fat. After puberty your body no longer produces these cells, so once removed the effect is permanent.
- Some thickening of the remaining fat cells may occur in the future, but this will be in line with your new shape.

Dr Josef Goldbaum

Dr Josef Goldbaum is a renowned and respected cosmetic surgeon, specialising in Liposuction.

His exceptional surgical skills and medical knowledge extend to a range of services, including collagen and hylaform implants, botox, autologous fat transfer and the treatment of surface veins and large varicose veins by injection sclerotherapy.

Dr Goldbaum combines good communication with technical and artistic skills to ensure his patients fully understand and feel comfortable with their chosen surgery.

A good rapport is imperative when undergoing such an important change in body shape and lifestyle.
